

## TopResponse Threat Advisory

**Release Date:** September 8, 2008

**Purpose:** The Top Layer TopResponse team is issuing an advisory, which provides information needed to provide protection for the Microsoft Visual Studio MSMASK32.OCX ActiveX Vulnerability (CVE-2008-3704).

**Top Layer Products:** IPS 5500 E-Series.

**Vulnerable Infrastructure:** Microsoft Visual Studio v6.0.

**Alert Type:** Critical vulnerability

**Risk Assessment:** Moderate

**Threat Impact:** Remotely exploitable vulnerability that could allow an attacker to control vulnerable systems

**Advisory Impact:** Prevention

**Summary:** The Microsoft Visual Studio Integrated Development Environment (IDE) v6 includes several ActiveX controls that are registered on the target when the environment is installed. There is a vulnerability in the implementation of one of the properties of the “MSMask” ActiveX control. The reported vulnerability could allow an attacker to execute arbitrary code on the users systems in the context of the logged-on user by enticing the user to open a specially crafted web page.

**Recommended Action:** Top Layer recommends the following actions:

Download and apply Protection Pack 2008-09-08-01 (or later) to put this new protection into place. This is automatically applied to the “Recommended Client Protection” IPS Rule Set. In order to take advantage of the protection, make sure the IPS rule tln-106198 is enabled in the IPS Rule Set used to inspect traffic to your Microsoft Visual Studio client infrastructure.
